

TRL GLOBAL FOUNDATION

UNCONDITIONAL GLOBAL BASIC INCOME

HUMANISM

MITIGATION OF GLOBAL INEQUALITY

The net worth of the world's 2,473 billionaires is more than \$7.7 trillion, which is equal to the GDP of four-fifths of the countries of the world in 2015. In their book *The Spirit Level: Why Greater Equality Makes Societies Stronger*, Richard Wilkinson and Kate Pickett demonstrate that inequality leads to an increase in crime and national and religious conflicts. This is why the struggle against worldwide inequality is in all of our interests, no matter what our social or financial status.

TRL provides a controlled solution to all aspects of this problem

MANAGED MIGRATION

The problem of migration and refugees has been particularly acute in the EU in recent years. This is partly a consequence of war and poverty, which inevitably have their roots in a lack of democratic institutions and the rights and freedoms they engender.

TRL creates the prerequisites for such institutions, and also ensures a universal income for all who have been a citizen over the past 20 years.

RIGHT TO RELIGION, GENDER AND RACIAL EQUALITY

A means of ensuring collective responsibility, which is lacking in many countries. TRL creates a sustainable system in which everybody has a stake, meaning that everyone has equal opportunities in practice, not just in theory

FUNDING FOR MEDICINE

TRL cryptocurrency can be spent on medical services as part of the global TRL Partnership programme, which accredited medical centres across the world will sign up to.

FIGHT AGAINST POVERTY

The average salary in the 35 countries with the highest average salary (around 700 million adults) is \$2408, while in the 99 countries with the lowest average salary, the figure is only \$170. Once TRL begins to be used, countries with low incomes and slow progress in the field of Rights and Freedoms will jointly receive a top-up from the TRL Local Fund of up to $\$445 \times 700 \text{ million} = \311 billion . More than \$225 billion will be channelled into humanitarian programmes and the development of the fundamentals for life in the 21st century. This should have an impact on the lives of more than two billion people directly, and affect us all indirectly

TERRORISM ARISING FROM POVERTY AND LACK OF EDUCATION

Poverty and a lack of high-quality education have always been key factors contributing to the rise of terrorism.

One of the goals of TRL is to solve the problem of the imbalance in social and economic development and certain countries' failure to develop steadily, with the ultimate aim of ensuring global security

A WORLD FOR OUR CHILDREN TO LIVE IN

A world where a global social mechanism functions to protect private property and the individual, and where the right to express critical views, including of states, can never be classed as a crime

FUNDING FOR EDUCATION

TRL cryptocurrency can be spent on educational services as part of the global TRL Partnership programme, which accredited educational organisations across the world will sign up to.

RIGHTS AND FREEDOMS

HUMAN RIGHTS

TRL is a decentralised social mechanism which motivates direct action on worldwide challenges in the sphere of Rights and Freedoms.

IMPLEMENTATION

The factors which have the most negative effect on a country's TRL rating include poor ratings from global advocacy organisations and failure to comply with the decisions of international courts.

ANTI_REPRESSIVE MECHANISM

TRL makes it impossible for events like the Holocaust or the mass repressions in the early USSR, in which tens of millions of people died, to happen again.

PROTECTION OF JOURNALISTS & ACTIVISTS

TRL creates a social shield for journalists and activists investigating human rights abuses, even in places where local authorities are very powerful, which is of critical importance in countries with undeveloped rights and freedoms.

FUNDING FOR NCOs

One of the most important factors behind the way the TRL algorithms work is independent media and non-profit organisations. The TRL Global Foundation will set aside a significant budget for supporting these organisations across the world.

CIVIC ENGAGEMENT

TRL will challenge the preconceived idea that human rights are a matter for activists, or the responsibility of states. The way TRL works encourages individual activism and makes the culture of human rights open to mass involvement

ECONOMICS

IMPACT/SOCIAL INVESTING

Investing in TRL at an early stage affords the exclusive opportunity to make your finances work globally to achieve goals in the sphere of sustainable development.
This is genuine philanthropy, for the good of all humankind.

4.5 BILLION PEOPLE IN THE SYSTEM

The number of TRL users is equal to the number of adult inhabitants of planet Earth.

UNCONDITIONAL GLOBAL BASIC INCOME

TRL is a fundamental mechanism for cooperation between citizens and states in an economy which includes artificial intelligence and a universal basic income.

ECONOMY 4.0

As part of the fourth industrial revolution, TRL increases the transparency of the economy and makes it more predictable. The system does away with questions of class divisions and potential political instability, creating a new world.

PUBLIC MONEY

The Token of Peace is a derived product with technological basis for the allocation of public finances and an option for development of public social welfare in the future.

It is anticipated that the Token of Peace will make it an attractive investment option for deprived countries to raise the level of rights and liberties.

BLOCKCHAIN & CRYPTO

TRL is based on blockchain, which means that all operations carried out will be maximally transparent and controlled.

The Token of Peace will go through several ICO stages, the end goal of which is to create an international cryptocurrency recognised by all countries of the world as a payment system and by the UN as a measure of Rights and Freedoms.
