

TRL GLOBAL FOUNDATION

UNIVERSAL TOKEN OF RIGHTS & LIBERTIES

The State's Interests in the Official Recognition of TRL

While creating TRL, we could not ignore the interests of the state, since we are not countering governmental institutions with the Token of Peace, but rather, we are striving to do everything so that every state becomes our ally. The main assumptions regarding the way in which TRL can be useful to states can be seen in the table to the next.

- A citizen has the right to sell and accumulated portion of TRL to investors, which, from the state's perspective, should be seen as international investments in the national economy
- The Token of Peace payout algorithm is capable of offsetting a negative forecast due to the mass introduction of artificial intelligence and the disappearance of jobs. Citizens will not remain without a means of existence if the government does not manage to be rebuilt under a new economy
- In domestic affairs, the Token of Peace is an incredibly powerful tool of checks and balances, preventing foreign interference since it is based on internal processes only: country's treatment of its citizens, fair courts, respect to individuals.
- TRL is capable of having a positive impact on the fight against poverty and mass migration, as it will be accrued according to the principle of the longest possession of citizenship.
- TRL solves the majority of problems described in the recent document of the roman club 'Come on!', and it means states, recognising TRL as a means of payment, can solve global tasks through the most progressive method.

Many aspects TRL is important for countries with a low level of rights and liberties. However, we live on one planet and therefore, poverty and low levels of education are the roots of uncontrollable migration and terrorism. Because of this, the no less dangerous phenomenon of political populism is beginning to flourish in developed countries.

Therefore, Roadmap means the entering and recognition of TRL by the UN, as a mechanism should emerge which equates any infringement on rights and liberties, and the crypto-activity representing them, to crimes against humanity. A similar mechanism will bring the recognition of TRL at the UN level by leading countries much closer.

Furthermore, the instinct of self-preservation regarding ethical concerns within society as a whole demands the voluntary participation of every TRL owner in the enabling of the search for and capture of people who are trying to commit burglary, theft and other actions which have a negative effect on the work of Token of Peace. Everyone should understand the simple truth: trying to damage the TRL mechanism harms 8 billion people and therefore, one will not be able to feel calm in any part of the world. However, the desire to find and report all discovered mistakes at any stage of the creation, delivery and distribution of TRL should be welcomed by the global society.

Facts and Differences from Other currencies

- For the first time in history, the monetary unit will not be tied to economic wealth but will be supplied by indicators of the attitude towards persons and dignity. Only now, thanks to the start of mass implementation of automatised processes of artificial intelligence, we can take the non-manufactured indicators as a benchmark (presently, due to the mass introduction of AI automation, we can target nonproduction factors)
- If the Token of Peace had existed for centuries, then in the Middle Ages, places of the Inquisition wouldn't have been found, and the huge tragedy that is the Holocaust or the repressions of the Soviet population would never have happened in the twentieth century
- The Token of Peace does not threaten overpopulation of the Earth, since a portion of the incomes from all the tokens of the planet will be directed towards financing space programmes for our Civilization.

Let's tell those who speak your language, that soon everything will change and that every person on Earth will be a part of it.
