

## UNIVERSAL TOKEN OF RIGHTS & LIBERTIES

TRL is a decentralized social mechanism of motivational influence with direct action against challenges in the areas of rights and liberties around the world.

We creation of social global basic income technology on the blockchain for UN as a fundamental instrument for the defence of rights and freedoms throughout the World. At the moment, the project is built exclusively on the work of volunteers.

As part of the fourth industrial revolution, TRL increases the transparency of the economy and makes it more predictable. The system does away with questions of class divisions and potential political instability, creating a new world. It's a unique index and an algorithm with the aim of reflecting the level of actual realisation of accepted international commitments and obligations in the field of human rights and environmental protection as well as for adherence to new international treaties to provide a higher level of protection for individuals at a domestic level.

How it work: <https://trl-global.org/30>

### 1) TRL is an Unconditional Global Basic Income UN

UBI is paid to every citizen irrespective of any benefits and income levels. Indicators that have an impact on the amount you will be receiving at the end of the month twelve times a year are linked to your compliance with rights and liberties within your country.

In the initial stages we are using the data from universally recognized organisations\* that are experts within their field. Each organisation presents comprehensive information for deciphering the indicator.

\*- United Nations (departments and divisions) - Council of Europe - the inter-American system for the protection of human rights - African Commission on Human and Peoples' Rights and African Court on Human and Peoples' Rights - Human Rights Watch - Reporters without borders - Freedom House - International partnership for Human Rights - Amnesty International - Article19 - OSCE ODIHR - International Federation for Human Rights - Front Line Defenders - UNICEF - OXFAM - International Committee of the Red Cross - International Crisis Group

### 2) TRL is an social global mechanism for UN

Our mission is to create a global instrument for the UN through which each person will understand the value of their rights and liberties and will be motivated to influence those important indicators in their country and their village. TRL is a widely available mechanism that does not have a private management centre or a decision-making centre. This project does not have an owner or a small group of people who make all the decisions on behalf of everyone.

We have compiled a list of areas that are positively affected by a social UBI, and we do not know any person who would not identify with own interests on this list. This is a story about people from all professions, countries and continents, of all religions and skin colours... the list is endless and has everything in it. And you are also part of this story; as well as your children, friends, relatives and anyone else close to you.

[Token of Peace would be distributed free of charge and would be given to every adult citizen of Earth.](#)

The unconditional basic income paid in cryptocurrency TRL is based on the average monthly wage (net) and the level of rights and liberties. The accrual (otherwise fixed price change) of cryptocurrency TRL is produced on the basis of the following value: 40% of the official average monthly wage in the country distributing TRL.

- The Token of Peace payout algorithm is capable of offsetting a negative forecast due to the mass introduction of artificial intelligence and the disappearance of jobs. Citizens will not remain without a means of existence if the government does not manage to be rebuilt under a new economy
- In domestic affairs, the Token of Peace is an incredibly powerful tool of checks and balances, preventing foreign interference since it is based on internal processes only: country's treatment of its citizens, fair courts, respect to individuals
- TRL is capable of having a positive impact on the fight against poverty and mass migration, as it will be accrued according to the principle of the longest possession of citizenship

An information source not only available in English. It helps to spread TRL/UN and the idea behind it around the globe (see your language).

The global aim of the TRL Translators Community: to emulate the success of the most translated document in history, the Universal Declaration of Human Rights, in terms of the quantity of languages it has been translated into.

2020 – TRL is examined and recognised by the UN as a fundamental instrument for the defence of rights and freedoms throughout the World

- For the first time in history, the monetary unit will not be tied to economic wealth but will be supplied by indicators of the attitude towards persons and dignity. Only now, thanks to the start of mass implementation of automatised processes of artificial intelligence, we can take the non-manufactured indicators as a benchmark (presently, due to the mass introduction of AI automation, we can target nonproduction factors)
- If the Token of Peace had existed for centuries, then in the Middle Ages, places of the Inquisition wouldn't have been found, and the huge tragedy that is the Holocaust or the repressions of the Soviet population would never have happened in the twentieth century

One of the main messages of support for such projects is the sense of humanity, which lives in every one of us.

Many of our advisers and volunteers see their own understanding of the world reflected in one or more of the areas on which TRL will have a positive global impact, and this is the source of their motivation to collaborate with us. In an age of extraordinary innovation, we know that solutions to the world's biggest challenges are best achieved when everyone contributes, and many minds working together will always result in a better outcome. This is genuine philanthropy, for the good of all humankind.
